INTRODUCTION TO THE PHASE 1 FAST METABOLISM DIET

The **Phase 1 Fast Metabolism Diet** is the cornerstone of a popular nutritional program created by celebrity nutritionist and bestselling author Haylie Pomroy. Designed to kickstart your metabolism and promote rapid fat loss, this diet is structured into three distinct weekly phases. Phase 1, often called the "Unwind" phase, focuses on reducing

stress hormones, nourishing your adrenal glands, and setting the stage for efficient calorie burning. Unlike crash diets that leave you feeling deprived and lethargic, the **Phase 1 Fast Metabolism Diet** emphasizes whole, nutrient-dense foods that work with your body's natural rhythms. Whether you are new to metabolic eating plans or looking to reboot a stalled weight loss journey, understanding Phase 1's unique approach is essential for long-term success.

Haylie Pomroy's Fast Metabolism Diet is

THE SCIENCE BEHIND PHASE 1 Foods affect your metabolism in specific ways depending on the day of the week. Phase 1 covers the first two days (Monday and Tuesday) of the weekly cycle. During this time, you focus on high-glycemic carbohydrates, moderate protein, and very low fat. This combination helps lower cortisol, the stress hormone that can cause stubborn belly fat and slowed metabolism. By intentionally eating ample carbs from fruits, whole grains, and starchy vegetables, you signal to your body that it is safe to release stored fat. The **Phase 1 Fast Metabolism Diet** is not about restriction; it is about strategic nourishment.

UNWINDING STRESS AND REBOOTING METABOLISM

Your metabolism is heavily influenced by hormonal balance. Cortisol, adrenaline, and insulin all play key roles. When you are chronically stressed or undereating, your body perceives a threat and holds onto fat reserves for survival. Phase 1 is designed specifically to counter this by providing abundant carbohydrates, which stimulate insulin production. Insulin then helps shuttle amino acids (from protein) into muscles and tells your body it is safe to stop storing fat. Additionally, complex carbs promote serotonin production, improving mood and reducing stress cravings. The **Phase 1 Fast Metabolism Diet** uses the first

two days of the week to "unwind" your adrenal glands, reduce inflammation, and replenish glycogen stores.

A typical Phase 1 day includes meals like oatmeal with berries, baked sweet potatoes, brown rice, lentils, and plenty of fresh fruits such as apples and bananas. Fat sources are kept to a minimum—no oils, butter, nuts, seeds, or avocados. This deliberate absence of fat forces your body to rely on carbohydrate metabolism, which helps break the cycle of sugar cravings and energy crashes. Many people experience an initial drop in water weight and bloating during Phase 1, which provides immediate motivation to continue the full three-week program.

FOODS ALLOWED AND FOODS TO

AVOID IN PHASE 1

To succeed on the **Phase 1 Fast Metabolism Diet**, you must carefully select your ingredients. Below is a detailed breakdown to help you plan meals without guessing.

Foods You Can Eat Freely

- **Whole grains:** Oats (rolled or steel-cut), brown rice, quinoa, millet, spelt, barley, and amaranth.
- **Fresh fruits:** Bananas, mangoes, apples, pears, grapes, pineapple, papaya, all berries, melon, and citrus fruits.
- **Starchy vegetables:** Sweet

potatoes, yams, potatoes, corn, peas, carrots, beets, and winter squash.

- **Legumes:** Lentils, chickpeas, black beans, kidney beans, pinto beans, and split peas.
- **Lean proteins:** Egg whites, skinless chicken breast, turkey breast, white fish (cod, tilapia), lean cuts of beef (93% lean or higher), and bison.
- **Non-starchy vegetables (unlimited but not the main focus):** Spinach, kale, broccoli, asparagus, bell peppers, cucumber, celery, and lettuce.
- **Herbs and spices:** All dried and fresh herbs, garlic, ginger, cinnamon, cayenne, turmeric. (Salt allowed in moderation.)

- **Beverages:** Water (at least half your body weight in ounces), herbal teas, black coffee (1 cup max), and unsweetened almond milk (limited).

Foods Strictly Off-Limits

- Oils, butter, margarine, ghee, lard, or any cooking fats.
- Nuts, seeds, nut butters, seed butters, avocado, olives, and coconut.
- Fatty cuts of meat (ribeye, chicken thighs, pork shoulder), bacon, sausage, or any processed meats.
- Dairy products (milk, cheese,

SAMPLE ONE DAY MEAL PLAN

by Julie Green, M.D., F.A.C.P. Except for unsweetened almond milk in very small amounts.

- Refined sugar, honey, maple syrup, agave, artificial sweeteners.
- Alcohol, sugary drinks, fruit juices (eat the whole fruit instead).
- White flour products (white bread, pasta, crackers, pastries).
- Soy products (tofu, edamame, soy milk) except for minimal amounts of tamari.

Remember that the **Phase 1 Fast Metabolism Diet** is only two days long. You will reintroduce healthy fats and more protein in Phase 2. This temporary restriction is what makes the protocol so effective at resetting your metabolism.

FOR PHASE 1

Here is a practical example of how to structure your meals during Phase 1. Adjust portion sizes based on your hunger and activity level, but always include a carbohydrate, a protein, and a vegetable or fruit at each meal.

Breakfast (around 7:00–8:00 AM)

- 1 cup cooked oatmeal (made with water) topped with 1 sliced banana and 1/2 cup blueberries.

- 4 egg whites scrambled with spinach and diced tomatoes (cook without oil using a non-stick pan or water/vegetable broth).
- Herbal tea or black coffee.

Morning Snack (around 10:00 AM)

- 1 large apple or 1 cup fresh pineapple chunks.
- 1 cup cooked lentils seasoned with salt and cumin (optional).

Lunch (around 12:30–1:30 PM)

- 6 oz grilled chicken breast (skinless) sliced over a large bed of mixed greens, cucumbers, and bell peppers.
- 1 medium sweet potato (baked or steamed) with cinnamon.
- Dressing: splash of balsamic vinegar with minced garlic and herbs (no oil).

Afternoon Snack

(around 3:30 PM)

- 1 cup steamed carrots or 1 cup grapes.
- Optional: 3 oz turkey breast slices.

Dinner (around 6:30–7:30 PM)

- 6 oz white fish (cod or tilapia) baked with lemon, rosemary, and a pinch of salt.
- 1 cup cooked brown rice (or quinoa).
- 1 cup steamed broccoli and cauliflower drizzled with a little vegetable broth.

- Dessert: 1 cup fresh mango cubes or a pear.

Evening Snack (if needed, before 9 PM)

- 1 cup cooked oatmeal (again) or 1 banana.

This sample plan provides roughly 1,500–1,800 calories, with about 70% of calories from carbohydrates, 20% from protein, and less than 10% from fat. The high carbohydrate intake may feel unusual if you have been following a low-carb diet, but it is exactly what your

body needs during the **Phase 1 Fast Metabolism Diet** to lower cortisol and restart fat burning.

BENEFITS OF FOLLOWING PHASE 1 CORRECTLY

Adhering strictly to the **Phase 1 Fast Metabolism Diet** offers several immediate and long-term benefits:

1. **Reduced bloating and water retention:** The high fiber from whole grains and fruits helps flush out excess fluid, making you feel lighter within 24 hours.
2. **Cortisol regulation:** Carbohydrates boost serotonin and calm the adrenal response, directly targeting stress-related weight gain.
3. **Improved energy and mood:** Steady blood sugar levels prevent mid-afternoon crashes and irritability.
4. **Better digestion:** Legumes and vegetables provide prebiotics and fiber that support gut health.
5. **Enhanced insulin sensitivity:** Over time, your cells become more responsive to insulin, reducing fat storage.
6. **Setup for later phases:** Phase 1 prepares your metabolism to efficiently burn fat during Phase 2 and stabilize in Phase 3.

TIPS FOR MAXIMIZING SUCCESS ON PHASE 1

Thousands of people have used the **Phase 1 Fast Metabolism Diet** to

jumpstart weight loss. Here are actionable strategies to help you stay on track:

- **Prep your food on Sunday.** Cook a large batch of oatmeal, brown rice, roasted sweet potatoes, and lentils. Wash and chop fruits and veggies so everything is ready Monday morning.
- **Watch your portion sizes.** Even though carbs are encouraged, you still need to eat enough protein to support muscle. Aim for a palm-sized portion of protein and a cupped handful of grains at each meal.
- **Avoid skipping meals.** The protocol requires eating three full

meals and two snacks daily. Going too long without food can spike cortisol and sabotage your results.

- **Hydrate strategically.** Drink at least half your body weight in ounces of water. Herbal teas count, but avoid caffeine after noon to protect sleep quality.
- **Manage stress.** Light walking, stretching, or even a few minutes of deep breathing can amplify the "unwind" effect of Phase 1.
- **Do not overdo exercise.** Phase 1 is not the time for intense workouts. The body is in recovery mode. Gentle movement only.

COMMON MISTAKES AND HOW TO AVOID THEM

Many dieters fail to see results from the

Phase 1 Fast Metabolism Diet

because of small but critical errors. Here are the most frequent pitfalls:

- **Mistaking "low fat" for "no fat" but sneaking in oils.** Even a teaspoon of olive oil can disrupt the hormonal shift needed in Phase 1. Read labels carefully—no added fats.
- **Choosing fruit juice instead of whole fruit.** Juice lacks fiber and concentrates sugar, which can spike insulin too sharply. Always eat the whole fruit.
- **Relying on processed gluten-free products.** Packaged gluten-free breads often contain added fats and gums. Stick to whole grains like oats, rice, and quinoa.

- **Skipping protein at breakfast.**

Egg whites or lean poultry at the first meal helps stabilize blood sugar. A carb-only breakfast (like just oatmeal) can lead to mid-morning hunger.

- **Forgetting to rotate fruits.**

Different fruits provide different micronutrients and phytochemicals. Variety supports overall health and prevents boredom.

- **Not drinking enough water.**

High-fiber diets require extra fluid; otherwise you may experience constipation.

HOW PHASE 1 FITS INTO THE FULL FAST METABOLISM DIET

The Fast Metabolism Diet is a weekly

three-phase rotation. Phase 1 (Monday-Tuesday) is the unwind phase. Phase 2 (Wednesday-Thursday) is the "Unlock" phase, where you focus on low-carb, high-protein, and a reintroduction of healthy fats to
